BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.

EXAMINER

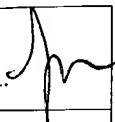

BULLOCK JR, LEWIS ALEXANDER

ART UNIT PAPER NUMBER

2126

DATE MAILED: 06/29/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/806,544	Applicant(s) GOPALAKRISHNAN ET AL. 	
	Examiner Lewis A. Bullock, Jr.	Art Unit 2126	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 July 2001.
 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 23-100 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) ☐ Claim(s) _____ is/are allowed.
 6) ☒ Claim(s) 23-100 is/are rejected.
 7) ☐ Claim(s) _____ is/are objected to.
 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
 10) ☒ The drawing(s) filed on 7/2/01 is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☐ All b) ☐ Some * c) ☐ None of:
 1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered. On page 46, lines 5-8, pg. 52, lines 13-15 and lines 24-28, Applicant details various other references. The examiner request a copy of each reference for consideration.

Claim Rejections - 35 USC § 112

1. Claim 30 recites the limitation "the input command" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Objections

2. Claim 40 is objected to because of the following informalities: It cannot be determined what DTMF means in the claim language. Appropriate correction is required.

Claim Rejections - 35 USC § 103

Art Unit: 2126

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 23-100 are rejected under 35 U.S.C. 103(a) as being unpatentable over LADD (U.S. Patent 6,269,336).

As to claim 23, LADD teaches a conversational browser (voice browser), comprising: means for interpreting a user command (voice input) and for generating a request (content request) to access a CML file (markup language document), wherein CML comprises meta-information implementing a conversational dialog for interaction with the user; and a CML processor (parsing unit) for parsing and interpreting a CML file to render the conversational dialog (col. 11, lines 25-49; col. 11, line 66 – col. 12, line 24). It would be obvious to one skilled in the art that browser means for interpreting is a voice interface for receiving the voice commands.

As to claims 24 and 25, LADD teaches a conversational browser (voice browser) of a computing device that provides a conversational user interface to render a conversational dialog (col. 11, lines 25-49). LADD also teaches that variations and modifications may be practiced on the system (col. 2, lines 10-14). However, LADD does not teach that the browser executes on top of an operating platform. Official Notice is taken in that it is well known in the art that a browser executes on a virtual

machine to send and handle remote request and therefore would be obvious in view of LADD in order to send and handle voice requests.

As to claims 26-29, LADD teaches a dialog manager (VRU server / interpreter unit) for managing and controlling the conversational dialog wherein the dialog manager allocates conversational engines (text to speech unit / automatic speech recognition unit) for rendering the conversational dialog by meta-information of a CML file (col. 9, lines 1-53; col. 13, lines 41-60).

As to claims 30-34, LADD teaches the input command (voice input) comprises multi-modal input (col. 11, lines 31-35), the CML is implemented in a declarative format encapsulating multi-modal dialog (col. 16, lines 5-56). Official Notice is taken in that it is well known in the art that XML is a markup language and therefore would be obvious that the markup language of LADD is XML.

As to claims 35-38, LADD teaches the input commands to the browser are voice commands (col. 11, lines 26-36). Therefore, it would be obvious to one skilled in the art that the since the commands are voice commands that navigates to a web page that the browser implements a "what you hear is what you can say", a "say what you heard", a "say what you will hear", and a "mixed initiative dialog formats.

As to claim 80, LADD teaches a method for accessing information, comprising the steps of: processing an input command (voice input) with at least one of a plurality of conversational engines (network fetcher); generating a request (content request) based on the processed input command (voice input) to access a CML file (markup language document) from a content server (mark up language server), the CML file comprising meta-information to implement a conversational dialog; transmitting the request (content request) and accessing the requested CML file from a content server using a standard networking protocol; and processing the meta-information comprising the CML file to render the conversational dialog (via parsing the information and executing the file using the browser) (col. 11, lines 25-49; col. 11, lines 66 - col. 12, line 25; col. 14, lines 3-17; col. 2, lines 20-39; col. 2, line 59 – col. 3, line 5).

As to claims 81 and 82, LADD teaches a conversational browser (voice browser) of a computing device executes the steps (col. 11, lines 25-49). LADD also teaches that variations and modifications may be practiced on the system (col. 2, lines 10-14). However, LADD does not teach that the browser executes on top of an operating platform. Official Notice is taken in that it is well known in the art that a browser executes on a virtual machine to send and handle remote request and therefore would be obvious in view of LADD in order to send and handle voice requests.

As to claims 84 and 85, LADD teaches customizing the CML file (markup language document) based on the conversational capabilities of the browser (the

Art Unit: 2126

structure of the language can be designed specifically for voice applications); and registering the capabilities with the content server (via storing the files on markup language servers) (col. 15, line 60 – col. 16, line 21).

As to claim 83, LADD teaches the steps are distributed using a conversational engine (test to speech unit / automatic speech recognition unit) and conversational arguments (request data / document attributes) (col. 11, lines 25-49; col. 9, lines 1-53; col. 13, lines 41-60).

As to claim 86-88, LADD teaches transcoding legacy content of the content server (information from the information sources) into CML based on predefined transcoding rules (via the parser unit) (col. 12, lines 15-24; col. 5, lines 8-11).

As to claim 89, LADD teaches processing the meta-information comprises playing back an audio file or generating synthesized speech output (col. 4, lines 50-61).

As to claim 90-93, LADD teaches the CML is implemented in a declarative format encapsulating multi-modal dialog (col. 16, lines 5-56). Official Notice is taken in that it is well known in the art that XML is a markup language and therefore would be obvious that the markup language of LADD is XML.

As to claims 94-100, LADD teaches the CML (via markup language document) comprises one of (1) a top level element that groups other CML elements; (2) an element that specifies output to be spoken to the user (3) a menu element for encapsulating a menu that presents the user with a list of choices wherein each choice is associated with a target address identifying a CML element to visit if the corresponding choice is selected; (4) a form element for encapsulating a form that allows the user to input at least one item of information and transmit the at least one item of information to a target address; and (5) a combination thereof (col. 16, lines 29 – col. 17, line 49).

As to claim 39, LADD teaches a system for accessing information (information), comprising: a content server (mark up language server) comprising content pages (mark up language documents), wherein the content pages are implemented using a CML (mark up language) to describe a conversational dialog for interaction with a user (col. 15, line 60 – col. 16, line 57); and a conversational browser (voice browser) for processing a CML page received from the content server to render its conversational dialog (col. 11, lines 25-49; col. 11, line 66 – col. 12, line 24). However, LADD does not teach that the browser executes on top of an operating platform. Official Notice is taken in that it is well known in the art that a browser executes on a virtual machine to send and handle remote request and therefore would be obvious in view of LADD in order to send and handle voice requests.

Art Unit: 2126

As to claims 40-44, LADD teaches the system comprises an IVR system implemented in CML (system capable of handling a voice markup language document) (col. 11, lines 25-49; col. 14, lines 3-17) and accessibly over a packet-switched network using a standard network protocol (col. 2, lines 26-39).

As to claims 45-51, LADD teaches the CML is implemented in a declarative format encapsulating multi-modal and speech dialog (col. 16, lines 5-56; col. 16, line 58 – col. 17, line 49). Official Notice is taken in that it is well known in the art that XML is a markup language and therefore would be obvious that the markup language of LADD is XML.

As to claims 52-54, LADD teaches a conversational browser (voice browser) on a computing device communicating over a communications network (col. 11, lines 25-49). LADD also teaches that variations and modifications may be practiced on the system (col. 2, lines 10-14). However, LADD does not teach that the browser executes on top of an virtual machine. Official Notice is taken in that it is well known in the art that a browser executes on a virtual machine to send and handle remote request and therefore would be obvious in view of LADD in order to send and handle voice requests.

As to claims 55 and 56, LADD teaches standard network protocols are utilized for accessing CML content pages from the content server (col. 5, lines 37-62; col. 2, lines 26-39).

As to claims 57-62, LADD teaches transcoding legacy content of the content server (information from the information sources) into CML based on predefined transcoding rules (via the parser unit) (col. 12, lines 15-24; col. 5, lines 8-11).

As to claims 63-71, LADD teaches CML (via markup language document) comprises a plurality of capability-based frames, an active link, a link to conversational data files, a link to at least one distributed conversational engine, a link to an audio file for playback, a confirmation message tag, TTS markup, scripting language and imperative code, and a link to one of a plug-in or an applet for executing a conversational task (col. 16, line 29 – col. 17, line 49).

As to claims 72-79, LADD teaches the CML (via markup language document) comprises one of (1) a top level element that groups other CML elements; (2) an element that specifies output to be spoken to the user (3) a menu element for encapsulating a menu that presents the user with a list of choices wherein each choice is associated with a target address identifying a CML element to visit if the corresponding choice is selected; (4) a form element for encapsulating a form that allows the user to input at least one item of information and transmit the at least one

Art Unit: 2126

item of information to a target address; and (5) a combination thereof (col. 16, lines 29 – col. 17, line 49).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lewis A. Bullock, Jr. whose telephone number is (703) 305-0439. The examiner can normally be reached on Monday-Friday, 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng An can be reached on (703) 305-9678. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
